MONITOR

- Image display allows users to interact with the computer.
- LED-backlit LCD monitors are the mainstream.

Traditional CRT monitor
(Cathode ray tube)

[HTTP://CFLU.LAB.NYCU.EDU.TW](http://CFLU.LAB.NYCU.EDU.TW)

LCD (Liquid Crystal Display)

Backlighting

2025/10/12

LCD Monitors

- Space saving
 - Without cathode ray tube
- Low power consumption
 - environmentally friendly and low heat generation
- Low radiation:
 - LCD display is almost radiation-free, which is less likely to cause eye discomfort.
- Flat design
 - No distortion of the picture.

The LED-backlit LCD monitor achieves **slimmer, lower power consumption, higher brightness, lower heat generation, and longer life.**

Features of Monitor

- Maximum size of viewable area
- Aspect ratio
- Best resolution
- Color Space
- Brightness & contrast ratio
- Response time
- Curvature
- Viewing angle (170~178°)
- Input interface/connector
- Panel type (IPS,PLS,VA,TN,...)
- Multimedia Interface
- 3D vision
- Multi-touch (for touchscreen)

Monitor Size & Ratio

- The diagonal size of the actual display area
 - without considering the border!

[HTTP://CFLU.LAB.NYCU.EDU.TW](http://CFLU.LAB.NYCU.EDU.TW)

2025/10/12

Best Resolution

XGA: eXtended Graphics Array

- The maximum number of dots (pixels) that can be displayed in the viewable area of the screen.
- 4:3 ratio: 1280 x 1024 (SXGA), 1600 x 1200 (UXGA)
- 16:9 ratio: 1366 x 768 (WXGA), 1600 x 900 (WXGA++), 1920 x 1080 (Full HD), 2560 x 1440, 3840 x 2160 (QFHD)
- 16:10 ratio: 1440 x 900 (WXGA+), 1680 x 1050 (WSXGA+), 1920 x 1200 (WUXGA), 2560 x 1600 (WQXGA), 4096 x 2160 (4K Ultra HD)

Brightness & Contrast Ratio

- **Brightness**
 - The brightness is measured in cd/m^2 (candlelight per square meter) by selecting 9 scattered liquid crystal dots and averaging them or taking the maximum value when the screen is completely white.
 - The higher the brightness, the brighter and clearer the picture can be maintained in bright environments (250 cd/m^2 or more is preferred).
- **Contrast Ratio**
 - The ratio of the brightness of the screen in the "all white" and "all black" states is measured separately.
 - The higher the ratio, the more vivid the color gradation (from full black to full white) of the screen will be.

[HTTP://CFLU.LAB.NYCU.EDU.TW](http://CFLU.LAB.NYCU.EDU.TW)

2025/10/12

Response Time

- The total time required to reach the light and return to the dark (in ms).
- If the response time is too long, it will cause the afterimage/ghost and the discontinuous images.

[HTTP://CFLU.LAB.NYCU.EDU.TW](http://CFLU.LAB.NYCU.EDU.TW)

2025/10/12

Input Interface

- D-Sub (VGA)
- DVI
- HDMI
- DisplayPort (DP)
- S-video(S端子)、CVBS(AV端子)、3RCA(色差端子)
- USB 3.1 Type-C

It should match the output connector of the graphics card!
